Abstract

Humans with dysfunctional Bruton's tyrosine kinase (Btk) are highly susceptible to bacterial infections. Compelling evidence indicates that Btk is essential for B cell-mediated immunity, whereas its role in myeloid cell-mediated immunity against infections is controversial. In this study, we determined the contribution of Btk in B cells and neutrophils to host defense against the extracellular bacterial pathogen *Klebsiella pneumoniae*, a common cause of pulmonary infections and sepsis. *Btk*^{-/-} mice were highly susceptible to *Klebsiella*
