平台功能一览

■ 2021年10月数据库首页改版

为了在功能上让出版物和各项作者服务（如开放科学平台、在线会议平台等）更容易被发现和检索，ACS对数据库首页进行了全面改版；但是读者们最常使用的期刊主页没有做任何变动。

The screenshot shows the homepage of ACS Publications. At the top, there's a search bar with placeholder text "Search text, DOI, authors, etc." and a magnifying glass icon. To its right are links for "My Activity" (with a user icon) and "Publications" (with a document icon). A vertical menu icon is also present.

The main navigation menu includes "FOR ORGANIZATIONS", "FOR AUTHORS", "EVENTS & CONFERENCES", and "OPEN SCIENCE". Below this, a large banner features the text "Most Trusted. Most Cited. Most Read." in white on a blue background. Underneath the banner, a subtext reads: "ACS Publications' commitment to publishing high-quality content continues to attract impactful research that addresses the world's most important challenges." A yellow button labeled "Get Access" is visible.

A sidebar on the right is titled "NEW & NOTEWORTHY" and lists three items:

- ACS Wins Bronze Brandon Hall Group HCM Excellence Award
- Learning to Create Effective Patents: A New ACS Guide Chapter
- ChemRxiv Surpasses 10,000 Preprints Posted

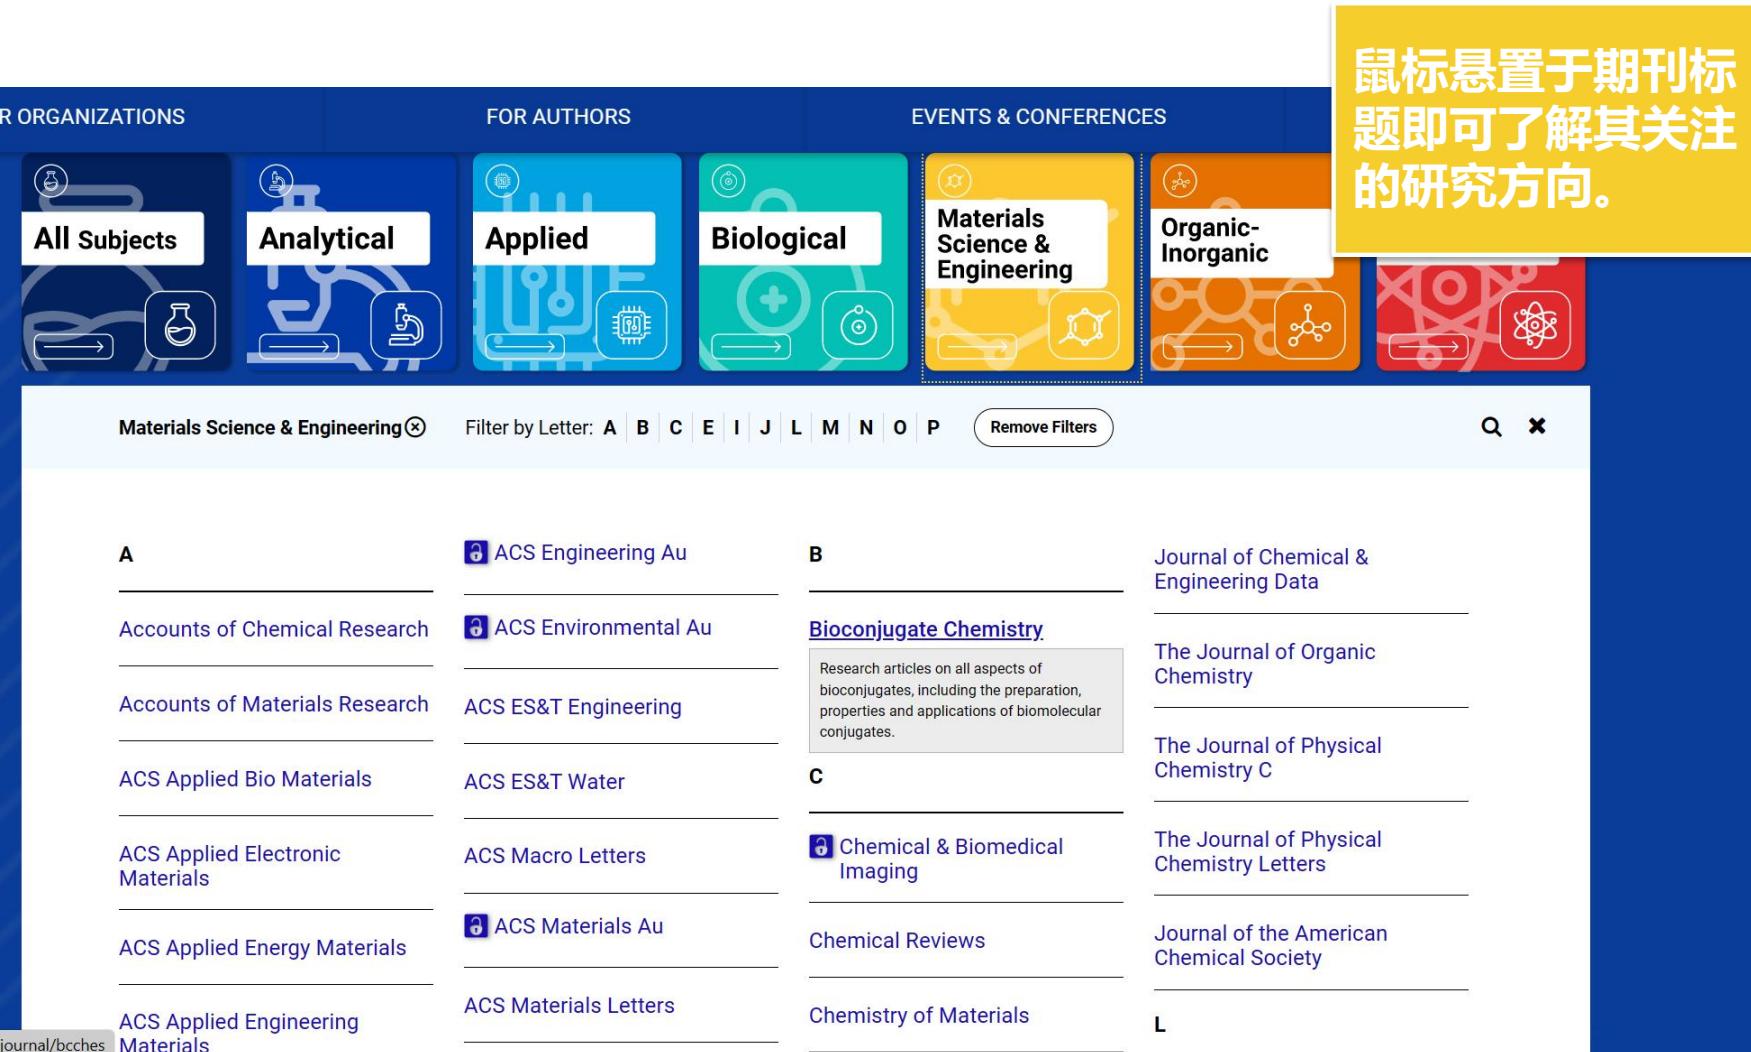

Below the sidebar, there's a section titled "Browse Content" featuring seven categories with icons: "All Subjects" (chemistry glassware), "Analytical" (microscope), "Applied" (circuit board), "Biological" (medical symbols), "Materials Science & Engineering" (atom models), "Organic-Inorganic" (molecules), and "Physical" (atom models).

At the bottom, there are four buttons: "Publish with ACS", "New Products & Services", "ACS Open Science", and "Explore ACS Solutions".

A yellow callout box on the right side contains the text: "可按分析化学、应用化学、生物化学、材料科学和工程、有机和无机化学以及物理化学六大学科分类浏览出版物。"

Large-Scale Chemical-Genetic Strategy Enables the Design of Antimicrobial Combination Chemotherapy in *Mycobacteria*

which is resistance to a compound results in a combination whose resistance barrier is higher than two noninteracting compounds.

Previously, we reported a screening strategy, PROSPECT, which generated chemical genetic interaction profiles (CGIPs) that characterized the fitness of 150 multiplexed, genetically barcoded hypomorph mutants (strains depleted of individual essential gene products) of *Mtb* H37Rv in response to ~50 000 compounds (Figure 1A). (3) PROSPECT quantifies the fitness changes of genetically barcoded hypomorph strains on compound treatment; the vector of fitness changes, measured as log(fold-change) of the abundance of barcodes of a particular hypomorph after treatment with a compound of interest relative to a vehicle control, is known as a CGIP (Figure 1A). Addressing the need for MOA diversity in tackling antimicrobial resistance, PROSPECT can be used to prioritize compounds from primary phenotypic screening data based on their putative MOA, instead of simply their potency. We illustrated PROSPECT's strengths in the discovery of BRD-8000, an uncompetitive inhibitor of a target, EfpA (Rv2846c), an essential efflux pump in *Mtb*. Though BRD-8 itself lacked potent activity against wild-type *Mtb* (minimal inhibitory concentration, MIC ≥ 50 μM), chemical optimization yielded BRD-8000.3, a narrow-spectrum, bactericidal antimycobacterial agent with good wild-type activity (*Mtb* MIC = 800 nM, Figure 1B) (3).

■ 期刊 - 新刊详解

ACS Materials Letters

2019年7月，ACS再推出一本材料科学类新刊 *ACS Materials Letters*，对其姊妹刊*Chemistry of Material(CM)* 进行补充。这本通讯期刊将作为前沿性基础和应用研究的沟通平台，为材料科学与其他学科（包括化学、环境、能源、生物制药和催化应用）交叉领域内高质量且有迫切发表需求的通讯文章提供便利。

本刊由CM主编Jillian Buriak监督，并由副主编Bin Liu主持。Bin Liu博士担任新加坡国立大学教务长讲座教授和化学与生物分子系主任。

随着*ACS Materials Letters*的推出，*Chemistry of Materials*和*ACS Applied Materials & Interfaces*不再发表快报体裁的文章。
